EDUCATION

Andhra University (Visakhapatnam, Andhra Pradesh - India)

Aug 2016 - Apr 2020

Bachelor of Technology - Computer Science and Engineering

EXPERIENCE

Software Engineer, IBM, India

Nov 2023 - Till Date

- Defined an error framework for better logging of errors in the overall application making it quick and easier to debug issues.
- Made use of MDC and ThreadContextMapFilter to segregate logs in a better way for understanding the flow of the application and identify the failures quickly.
- Utilized AWS S3 Cloud Object Storage to ingest and retrieve COG files, enabling real-time processing and API-based streaming of Geospatial data.
- Implemented Disaster Recovery (DR) solutions by designing and addressing various failure scenarios, enhancing system availability and resilience.
- **Open-source contributor** to IBM's Environmental-Intelligence GitHub project, showcasing the capabilities of *IBM EI*.
- Implemented caching mechanism by making use of *ibmcloud* which resulted in reduction of query time by more than 90% without increasing costs.

Software Engineer, CGI Information Systems and Management, India

Oct 2022 - Nov 2023

- Orchestrated the creation of libraries and their deployment in a private NPM Registry, optimizing code re-usability and fostering a collaborative development environment; engineered Micro-Frontend web components with Angular elements, incorporating dynamic input fields and tailored validation through Reactive forms.
- Implemented real-time WebSocket communication and localization for languages such as English, Spanish, etc.
- Revamped REST API performance by implementing Hazelcast caching mechanism, resulting in an impressive 40% reduction in response time, enhancing user experience and overall system efficiency.
- Implemented thread pools to call REST APIs via services, slashing feature duration from 2 minutes to a mere 6 seconds, improving response time.
- Engaged in code reviews, reinforcing best practices and improving code quality, resulting in a 20% reduction in post-deployment issues.

PROJECTS

Outage Prediction - IBM (ISL)

May 2025 - till date

React, NodeJS, PostgreSQL, AWS, Grafana

- Outage Prediction provides a central place to view expected service outages and the types of outages within a defined service territory. These predictions help assess the impact of both weather and climate change on a utility system and help to determine the correct response to mitigate the impact.

Environmental Intelligence - IBM (ISL)

Nov 2023 - May 2025

Springboot, MySQL, Postgres, MongoDB, IBMCloud, AWS

- IBM Environmental Intelligence Suite is a SaaS platform to monitor, predict, and respond to weather and climate impact. It includes dashboards, alerts and notifications, Geospatial and weather data APIs, and add-ons with industry-specific environmental models for business resilience and optimization.
- It combines accurate weather, Geospatial, Greenhouse Gas (GHG) emissions and industry-specific data so you can build custom climate adaptation solutions that fit the needs of your enterprise.

CACS - Computer Assisted Collection System - CGI

Dec 2020 - Nov 2023

Angular, Springboot, Kafka, Camunda, Keycloak, MySQL

- CACS is SaaS offering which offers a fully-integrated, end-to-end default management solution that empowers lenders to navigate cost pressures, streamline third-party integration, adapt to dynamic compliance requirements, and replace outdated processes and technologies.
- In simpler terms, it provides the lenders with the capabilities of managing defaulted accounts throughout the collection life cycle.

SKILLS

Languages: Java, Python, C, SQL, HTML, CSS, TypeScript

Frameworks/Tools: Angular, Angular Material, Web Accessibility, WebSockets, Micro Front End, Springboot, Kubernetes, Docker, Git, Jira, Source Tree, debugging, VS Code, Spring Tool Suite
